

## Make a mathematical star

1. Cut out the triangles.
2. Stick one on top of the other to make a star.

3. Decorate your star however you like!

### Ask your friends to make some stars.

Have a go at displaying your stars around your school. Maybe you could go on a treasure hunt, and count how many stars you spot.

**Challenge:**  
Can you make a star out of any other materials? You could try using lollipop sticks or pipe cleaners for a more 3D effect.

What do you notice about the stars that are furthest away from you?  
What does this tell you about the stars in the sky?
