Buddy's flower patch templates

Buddy's flower patch templates are a fantastic way to learn multiples of numbers and help support times tables learning.

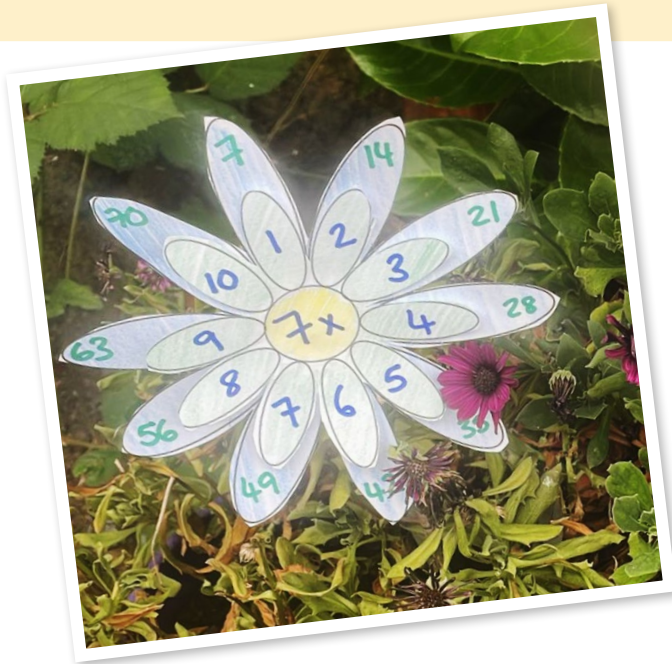

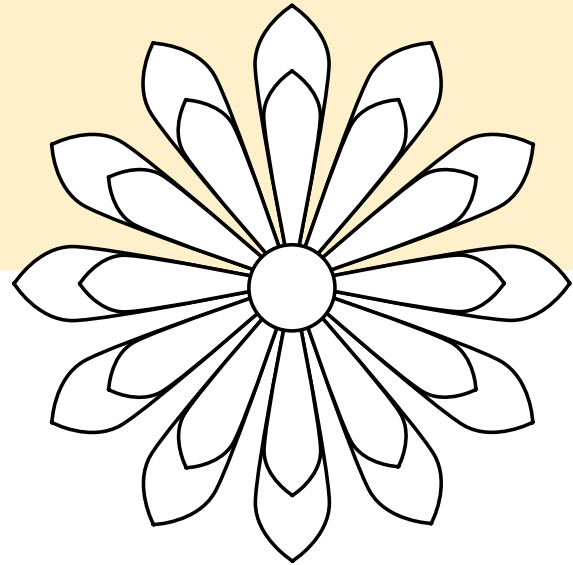

Times Tables:

You can use the 10 petal templates to create a fun way to learn multiplication.

The example below shows the 7 times table using the 10-petal template, but you can create your own by using the blank templates. Add the number in the centre and the timetables around the outside on each petal.

Challenge:

Why not try and create a 12 petal flower.

Why is this maths?

You are exploring a creative way to practise and display times tables. Number bonds help you to understand how numbers work and can help you with addition, subtraction and times tables!
